

Technology Stack

Date	30 September 2026
Team ID	6abc94497a3f72d0b9a67d15
Project Name	PocketSmart AI: Your Smart Budget and Recommendation Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

1	Frontend / Client-Side HTML5, CSS3, JavaScript, Jinja2 templates	HTML CSS JavaScript Jinja2	Provides the browser interface, page styling and client-side interaction. Jinja2 supports server-rendered HTML templates used by the FastAPI application.
---	---	-------------------------------------	---

	Backend / Server-Side	Python FastAPI Uvicorn	Python provides the application language; FastAPI handles web routes and APIs; Uvicorn runs the application server.
	Database / Data Storage	Application models / project data	The project uses Python models and application-level data handling. No separate database technology is specified in the project information.
	Cloud / Hosting / Deployment	Uvicorn / local deployment	Runs the FastAPI application locally through Uvicorn. A separate cloud hosting platform is not specified in the project information.
	Version Control & CI/CD	GitHub	Supports source-code version control, collaboration and the required public repository submission.

	Version Control & CI/CD	GitHub	Source-code hosting and collaboration for the project repository. No separate CI/CD service is specified.
	Third-Party APIs / Other Tools	Google Gemini Google GenAI SDK	Provides the AI recommendation layer used to generate personalized budget-aware suggestions for the planner modules.
