Project Title	PocketSmart AI: Your Smart Budget and Recommendation Assistant

Project Proposal (Proposed Solution) report

PocketSmart AI is a Generative AI-powered web application that helps users make personalized, budget-aware decisions for home interiors, parties and occasion-based jewelry. It combines a FastAPI backend, web interface and Google Gemini to provide contextual recommendations.

Project Overview	
Objective	Provide personalized recommendations within a user's defined budget and context across home interior, party and jewelry planning.
Scope	Web-based planning workflows with budget inputs, preferences, occasion/context and AI-generated recommendations.
Problem Statement	Users face many choices, price ranges and platforms when planning purchases, making it difficult to compare options and stay within budget.
Impact	Reduces decision complexity by organizing inputs and generating contextual suggestions, helping users plan more efficiently.
Proposed Solution	PocketSmart AI accepts user requirements and budget information, processes the request through FastAPI and uses Google Gemini to generate tailored recommendations.
Key Features	Home Interior Planner; Party Planner; Jewelry Planner; authentication; budget-aware recommendations; web-based user interface.

Resource Type	Description	Specification / Allocation
Hardware	Development / runtime computing	Standard laptop/PC suitable for Python web development
Memory	Application and development memory	Adequate RAM for FastAPI, browser testing and AI API calls
Storage	Project files, templates and logs	Local project storage; GitHub repository for version control
Software	Backend framework	Python, FastAPI, Uvicorn
Frontend	User interface	HTML, CSS, JavaScript, Jinja2
AI / API	Generative AI integration	Google Gemini through google-genai SDK
Development	Project tools	Python development environment and web browser
Data	Application inputs	User budgets, preferences, planner inputs and recommendation responses
