

## Performance Testing

|                      |                                                                |
|----------------------|----------------------------------------------------------------|
| <b>Date</b>          | 30 September 2026                                              |
| <b>Team ID</b>       | 6abc94497a3f72d0b9a67d15                                       |
| <b>Project Name</b>  | PocketSmart AI: Your Smart Budget and Recommendation Assistant |
| <b>Maximum Marks</b> | 5 Marks                                                        |

### Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

#### Step 1: Testing Overview

| Field                      | Details                                                                 |
|----------------------------|-------------------------------------------------------------------------|
| <b>Testing Tool Used</b>   | [e.g., JN] Not specified in supplied evidence                           |
| <b>Type of Testing</b>     | [e.g., Lo] Functional / API validation; no performance metrics recorded |
| <b>Target Module / API</b> | [Specify] Home Interior, Party Planner and Jewelry Planner workflows    |
| <b>Test Environment</b>    | [e.g., Lo] Local development environment / FastAPI-Uvicorn              |
| <b>Test Date</b>           | 30 September 2026                                                       |

#### Step 2: Test Scenarios

| S.No | Test Scenario / Description   | No. of Virtual Users | Duration (sec) | Expected Outcome                            |
|------|-------------------------------|----------------------|----------------|---------------------------------------------|
| 1    | Home Interior Planner request | 1                    | Not recorded   | Expected recommendation response            |
| 2    | Party Planner request         | 1                    | Not recorded   | Expected budget-aware suggestions           |
| 3    | Jewelry Planner request       | 1                    | Not recorded   | Expected occasion-based recommendations     |
| 4    | Repeated planner requests     | 1                    | Not recorded   | Stable responses without application errors |

### Step 3: Performance Test Results

| S.No | Metric               | Target Value | Actual Value | Status (Pass / Fail) | Remarks                              |
|------|----------------------|--------------|--------------|----------------------|--------------------------------------|
| 1    | Response Time (Avg)  | < 2 seconds  | Not measured | Not assessed         | No recorded measurement              |
| 2    | Response Time (Max)  | < 5 seconds  | Not measured | Not assessed         | No recorded measurement              |
| 3    | Throughput (Req/sec) |              | Not measured | Not assessed         | No throughput test evidence supplied |
| 4    | Error Rate           | < 1%         | Not measured | Not assessed         | No recorded error-rate measurement   |
| 5    | CPU Utilization      | < 80%        | Not measured | Not assessed         | No CPU profiling result supplied     |
| 6    | Memory Utilization   | < 80%        | Not measured | Not assessed         | No memory profiling result supplied  |

### Step 4: Observations & Analysis

**Key Findings:**

No measured performance dataset was supplied, so response-time, throughput, CPU and memory values are not claimed.

**Bottlenecks Identified:**

The Gemini/API dependency can introduce variable response time; high-concurrency usage has not been quantitatively tested in the supplied evidence.

**Optimization Steps Taken:**

No measured optimization results were supplied. A dedicated load/stress test is recommended.

No performance-testing screenshots supplied.

Evidence status: Not available in supplied files.

No additional performance evidence supplied.
